

# Curriculum Plan – Core Maths (AQA Mathematical Studies)

Year 12	Enrichment:				Review and evaluation: July 2025	
	Topics	Assessment	Substantive Knowledge	Misconceptions	Key Vocabulary	Knowledge tracking
Term 1 Teacher 1	<b><u>Paper 1 Content</u></b>		F7.4 Budgeting, rule of 72		Rule of 72	
	1. Budgeting		F7.1 The effects of inflation, including (RPI) and (CPI)	Incorrect multipliers for % of/ increase/decrease.	Income	GCSE knowledge of Percentages:
	2. Inflation		F2.1 Interpreting percentages and percentage changes as a fraction or a decimal and interpreting these multiplicatively	Using 0.7 rather than 0.07 for a calculation 7% of. 0.05, not 1.05 for 5% increase. Dividing to complete a percentage decrease. Not dividing by multipliers to find reverse percentages.	Expenditure	- Percentage of
	3. Percentages		F2.2 Expressing one quantity as a percentage of another		Cash Flow	- Percentage Increase and Decrease
	4. Financial Problems		F2.3 Comparing two quantities using percentages	Thinking the 'new' is the 'original'.	Contingency	- Percentage Change
	5. Exchange Rates		F2.4 Working with percentages over 100%		Retail Price Index (RPI)	- Reverse percentages
	6. The modelling cycle		F2.5 Solving problems involving percentage change, including percentage increase/decrease and original value problems	Using simple interest instead of compound. Similar errors in decay and repeated percentage change problems.	Consumer Price Index (CPI)	- Simple and Compound Interest
	7. Fermi estimation		F3.1 Simple and compound interest		Office for National Statistics (ONS)	- Standard Exchange rate principles
			F7.2 Setting up, solving and interpreting the solutions to financial problems, including those that involve compound interest using iterative methods		Inflation	
			F7.3 Currency exchange rates including commission		Hyper Inflation	
Teacher 2	<b><u>Paper 2 Content</u></b>		C1.1 Criticising the arguments of others	Incorrect trend identification	Critically analyse	From GCSE:
	1. Critical analysis of data in the media (substantiating headlines' claims)		C2.1 Summarising and report writing	Ignoring or misinterpreting the scale	Percentages	Statistical charts and data comprehension:
	2. Combatting misconceptions of percentages and graphs		C3.1 Comparing results from a model with real data	Over generalisation	Trends	- Properties of bar charts, scatter graphs, pie charts, etc
	3. Critical analysis of data representation		C3.2 Critical analysis of data quoted in media, political campaigns, marketing etc	Misidentifying outliers	Axes	- Fluency in percentages
			R1 Compound projects:		Substantiate	- Concepts of proof (giving conclusions)
			R1.1 Representing compound projects by activity networks		Conclusion	
			R1.2 Activity-on-node representation will be used		Misleading	
					Activity network	
					Node	
					Arc	
					Precedence table	
					Dependent	

## Curriculum Plan – Core Maths (AQA Mathematical Studies)

	4. Activity networks and precedence tables					- Fluency in using and comparing averages
<b>Term 2</b> <b>Teacher 1</b>	<b><u>Paper 1 Content</u></b>  1. Student loans  2. Mortgages  3. Income tax, National Insurance, Value Added Tax (VAT)  4. Savings and investments. Annual Equivalent Rate (AER)  5. Annual Percentage Rate (APR)  6. The modelling cycle  7. Fermi estimation		F4.1 Student loans <ul style="list-style-type: none"> <li>- Interest added year on year.</li> <li>- Limits of borrowing per student and dependencies of borrowing.</li> <li>- Repayment conditions based on Gross salary</li> <li>- Calculations for various salary amounts and different bands depending on year of issue</li> <li>- Excel use to represent repayments</li> </ul> F4.1 Mortgages <ul style="list-style-type: none"> <li>- Types of mortgage</li> <li>- Repayment calculations</li> </ul> F6.1 Income tax (IT), National Insurance (NI), Value Added Tax (VAT) <ul style="list-style-type: none"> <li>- Using Gross salary, calculate tax for each to show resultant annual and monthly net pay</li> </ul> F3.1 F3.2 savings and investments <ul style="list-style-type: none"> <li>- Annual Equivalent Rate (AER)</li> <li>- Using the formula to find AER, Nominal Interest Rate, Compounding Interest rate</li> </ul> F4.1 Annual Percentage Rate (APR) <ul style="list-style-type: none"> <li>- Using the formula to find Amount Borrowed, Repayment amount, Nominal Interest rate for single and multiple payment strategies</li> </ul> E1 The modelling cycle E2 Fermi estimation	Student loans are always fully repaid (most are not) Everyone gets the same amount in grants and maintenance (they don't) Repayment is based on whole Salary (forgetting that it is only above threshold value)  A lower interest rate means a lower mortgage (Mortgage repayment is dependent on rate AND borrowing amount)  Everyone has to pay tax (no not below the personal allowance threshold) You only need to calculate NI or IT (you need to do both) Everyone pays the same tax rate (depends on gross salary)  Nominal rate is the same as APR or AER (it is not)	Tuition Fees Maintenance Loan Grants  Repayment mortgage Interest Free Mortgage Variable rate Fixed Rate  National Insurance (NI) Income Tax (IT) Value Added Tax (VAT) Tax Bands Gross Salary Net Salary Pension Contributions Personal Allowance Deductions Benefits  Annual Equivalent Rate (AER) Annual Percentage Rate (APR) Nominal rate Overdraft Loan Pay day loan Credit Card	GCSE knowledge of Percentages:  - Percentage of - Percentage Increase and Decrease - Percentage Change - Reverse percentages - Simple and Compound Interest  GCSE knowledge of Rearrangement of basic and advanced equations

## Curriculum Plan – Core Maths (AQA Mathematical Studies)

<p><b>Teacher 2</b></p>	<p><b>Paper 2 Content</b></p> <ol style="list-style-type: none"> <li>1. Drawing activity networks from precedence tables</li> <li>2. Activity networks with durations</li> <li>3. Early Event Times and Late Event Times</li> <li>4. Floats</li> <li>5. Critical activities and critical paths</li> <li>6. Gantt Charts</li> <li>7. Time analysis</li> </ol>		<p>R1 Compound projects:</p> <p>R1.1 Representing compound projects by activity networks</p> <p>R1.2 Activity-on-node representation will be used</p> <p>R2.1 Using early time and late time algorithms to identify critical activities and find the critical path(s)</p> <p>R3.1 Using Gantt charts (cascade diagrams) to present project activities</p>	<p>Putting activities wherever they will fit on the activity network rather than having all arrows going forwards (to represent passage of time in a single direction). Forward and backward pass errors quite common as they confuse whether they are selecting the largest option or the smallest.</p> <p>Including the duration as part of the float. Forgetting to add on the duration of the final activity to get the initial LET.</p>	<p>Activity network</p> <p>Precedence table</p> <p>Duration</p> <p>Early Event Time</p> <p>Late Event Time</p> <p>Float</p> <p>Critical activity</p> <p>Critical path</p> <p>Gantt Chart</p>	<p>No prior knowledge required</p>
<p><b>Term 3</b> <b>Teacher 1</b></p>	<p><b>Paper 1 Content</b></p> <ol style="list-style-type: none"> <li>1. Spreadsheets</li> <li>2. Standard Mathematical operations</li> <li>3. Limits of accuracy and approximation</li> <li>4. Types of Data, Data collection and sampling strategies</li> <li>5. The modelling cycle</li> <li>6. Fermi estimation</li> </ol>	<p>Internal assessment in exam conditions: Single combined paper on content covered so far.</p>	<p>F1.1 substituting numerical values into formulae, spreadsheets and financial expressions, including bank accounts</p> <p>F1.2 using conventional notation for priority of operations, including brackets, powers, roots and reciprocals</p> <p>F1.3 applying and interpreting limits of accuracy, specifying simple error intervals due to truncation or rounding</p> <p>F1.4 finding approximate solutions to problems in financial contexts</p> <p>D1.1 appreciating the difference between qualitative and quantitative data, including the difference between discrete and continuous quantitative data</p> <p>D1.2 appreciating the difference between primary and secondary data, including the use of secondary data that have been processed eg grouped</p> <p>D1.3 collecting quantitative and qualitative primary and secondary data</p> <p>D2.1 inferring properties of populations or distributions from a sample, whilst knowing the limitations of sampling</p> <p>D2.2 appreciating the strengths and limitations of random, cluster, stratified and quota sampling methods and applying this understanding when designing sampling strategies, appreciating that improving accuracy by removing bias and increasing sample size may cost/save both time and money</p>	<p>Confusing rounding the decimal places and significant figures</p> <p>Errors on the upper bound, not accounting for more decimal places</p> <p>Doing the full calculation when asked to estimate.</p> <p>Three is only 1 correct way to model different data (there are multiple strategies)</p>	<p>Excel</p> <p>Cell Substitution</p> <p>Error Bounds and intervals</p> <p>Truncate</p> <p>Qualitative data</p> <p>Quantitative data</p> <p>Discrete data</p> <p>Continuous data</p> <p>Primary data</p> <p>Secondary data</p> <p>Sample</p> <p>Random sample</p> <p>Cluster sample</p> <p>Stratified sample</p> <p>Quota sample</p>	<p>GCSE knowledge of upper and lower bounds and limits of accuracy</p> <p>Basic GCSE knowledge of types of graph and their interpretation</p>

## Curriculum Plan – Core Maths (AQA Mathematical Studies)

			E1 The modelling cycle E2 Fermi estimation			
Teacher 2	<b>Paper 2 Content</b> 1. Experimental vs theoretical probability 2. Representations of probability: two-way tables, tree diagrams, Venn diagrams 3. Probability of combined events 4. Expected value 5. Cost-benefit analysis 6. Control measures 7. Risk analysis		R4.1 Understanding that uncertain outcomes can be modelled as random events with estimated probabilities. Knowing that the probabilities of an exhaustive set of outcomes sum to one.  R4.2 Applying ideas of randomness, fairness and equally likely events to calculate expected outcomes  R5.1 Understanding and applying Venn diagrams and simple tree diagrams Understanding that $P(A)$ means the probability of event A Understanding that $P(A')$ means the probability of not event A Understanding that $P(A \cup B)$ means the probability of event A or B or both Understanding that $P(A \cap B)$ means the probability of event A and B  R6.1 Calculating the probability of combined events: both A and B; neither A nor B; either A or B (or both) To include independent and dependent events.  R7.1 Calculating the expected value of quantities such as financial loss or gain  R8.1 Understanding that many decisions have to be made when outcomes cannot be predicted with certainty  R9.1 Understanding that the actions that can be taken to reduce or prevent specific risks may have their own costs. Including the costs and benefits of insurance  R10.1 Using probabilities to calculate expected values of costs and benefits of decisions. Other factors must be considered, for example The regulatory framework (eg compulsory insurance) Minimising the maximum possible loss	Adding probabilities instead of multiplying  Treating outcomes as equally likely when they have different probabilities  Incorrectly using the rule of probabilities adding up to 1.  Not multiplying by the probabilities to find expected values  Not laying work out clearly enough to keep track of calculations they've already done and thus completing the same calculation too many times  Not considering every possible outcome	Experimental probability Theoretical probability Two-way table Tree diagram Venn diagram Universal set Union Intersection Complement Mutually exclusive Independent events Dependent events Expected value Random events Control measure Mitigation Cost benefit analysis Insurance	From GCSE (to be recapped and built upon throughout this term): Basic probability rules Tree diagrams Venn diagrams Set notation and vocabulary Two-way tables Fluency in percentages Expected outcomes Theoretical vs experimental probability

## Curriculum Plan – Core Maths (AQA Mathematical Studies)

			R10.2 Understanding that calculating an expected value is an important part of such decision making			
<b>Term 4</b> <b>Teacher 1</b>	<b>Paper 1 Content</b>  1. Graphical Construction, Analysis and Interpretation  - Histograms - Cumulative Frequency - Box Plots - Stem and Leaf  2. Standard Deviation  3. The modelling cycle  4. Fermi estimation		D3.1 Calculating Mean, Median, Mode, Quartiles, Percentiles, Range, Interquartile range from Raw data and from graphs  D3.2 Construct different types of graph from raw data including cumulative frequency diagrams, stem-and-leaf diagrams or box plots.  F5.1 and D3.2 graphical representation, including plotting points to create graphs. Use these graphs to compare and contrast different scenarios and financial interpretations, reaching conclusions based on these measures  D4.1 constructing and interpreting diagrams for grouped discrete data and continuous data, knowing their appropriate use and reaching conclusions based on these diagrams, including histograms with equal and unequal class intervals  Calculate standard deviation from raw data. Calculate SD manually and also understand how to get the calculator to calculate SD by switching to stats mode and inputting raw data.  E1 The modelling cycle E2 Fermi estimation	Plotting the frequency rather than frequency density in a histogram  Plotting frequency polygons at the edge of the range and cumulative frequency at the centre.  Plotting bars on a cumulative frequency diagram  Stating facts rather than comparing when asked to do so.  Omitting a key in a stem-and-leaf diagram  Not adding all the mean values in SD calculations.  All calculators do the same calculation method	Mean Median Mode Quartiles Percentiles Range Interquartile range Raw data  Histograms Cumulative Frequency Box Plots Stem and Leaf  Standard Deviation Measure of spread Frequency distribution	Basic GCSE knowledge of types of graphs and their interpretation:  - Histograms - Cumulative Frequency - Box Plots - Stem and Leaf - Mean - Mode - Median - Range - IQR
<b>Teacher 2</b>	1. Preliminary material work 2. Exam practice	Exam papers completed in class and for homework, alternating between exam conditions and otherwise.	Going over all past exam papers Looking at this year's preliminary material and working on predicting questions and practising answers to them.			
<b>Term 5</b> <b>Teacher 1</b>	<b>Paper 1 Content</b>  1. Critical Analysis and comparing data in context	Exam papers completed in class and for homework, alternating between exam conditions	<b>C1.1 - C3.1</b> Criticising the arguments of others. Comparing results from a model with real data. Critical analysis of data quoted in media, political campaigns, marketing etc.  C2.1 summarising and report writing techniques, strategies and presentation. How to influence others in a business and financial context			

Curriculum Plan – Core Maths (AQA Mathematical Studies)

Teacher 1	2. Report summarising and writing	and otherwise.	E1 The modelling cycle E2 Fermi estimation			
	3. The modelling cycle	Sit the external exam.	Going over all past exam papers Looking at this year’s preliminary material and working on predicting questions and practising answers to them.			
	4. Fermi estimation					
	5. Preliminary material work					
	6. Exam practice					
Teacher 2	1. Preliminary material work 2. Exam practice	Sit the external exam.	Going over all past exam papers Looking at this year’s preliminary material and working on predicting questions and practising answers to them.
